

So here is the low down.
Wanna shoot AR's next video?

HAVE YOUR DEVICE READY WITH AT LEAST 5GB OF SPACE.

- iphones
- ipads
- ipods
- If your Android you have to investigate, but typically we want 1080p video.

We will coordinate where everyone will stand to shoot the encore of the show, hopefully before the show. The back of the room is just as important as the front of the stage, but ideally everyone with a device to shoot on will be assigned an angle to shoot.

Someone with a film slate (Clap Stick) will address the crowd before the encore. All devices should begin to roll video on this persons instruction. Once rolling we will slate the take, clap, and the encore will begin. It is very important that you do not stop and start the record during the performance. Everyone will be instructed to stop rolling ("cut") quite a few moments after the song, so just keep on your shot until then.

It is also important, very important, that everyone hold their device in the proper aspect ratio (16x9)

Do not worry about sound because the band will be plating to a prerecorded track. And last, but not least, please if you are using an iphone, or any other smart phone, turn on airport mode to ensure your phone will not ring during the record.
